

Marine Air Ground Task Force II (MAGTF II) System

SYSTEM DESCRIPTION

Marine Air Ground Task Force II (MAGTF II) is an integrated, operational decision-support system developed for the United States Marine Corps to enhance the development of Time Phased Force Deployment Data (TPFDD) and provide an automated linkage with the Joint Operation Planning and Execution System (JOPES). MAGTF II is designed to improve and condenses the operational planning process through interactive design and database management methodologies. It is used for deliberate and crisis-action planning, as well as for exercise support. Using MAGTF II, planners can create and modify plans/TPFDDs/ULNs by developing force structures, tailoring force lists, computing sustainment, and estimating force lift requirements. MAGTF II and JOPES pass B3 and B8 files via TPFDD Load Tool (TLT).

INTEROPERABILITY CERTIFICATION STATUS

Please refer to the [Joint GCCS Interoperability Status Table](#)
